The 4th ISTANBUL Winter Workshop will work on bridges: both on the concept of bridge and on the bridge as construction. Due to its outstanding location Istanbul counts with a big variety of bridges linking not only several parts of the town, but even 2 continents. We will visit bridges from different historical periods, some built by well-known architects, others representing a concrete style or a specific technic, all giving identity to the neighbourhood and some of them to whole Istanbul. We will understand their logic and relationship to the environment. We will discover how their close surroundings determined the bridges and how the bridges influence the neighbourhoods. By using Istanbul as case study we will be able to apply the obtained knowledge to other places and circumstances.

23rd to 27th January 2017, in Istanbul

Visits and excursions | Fieldwork | Lectures | Workshop
All activities carried out in English. Visa required. Students will realize a video –working in international groups- on their own experience. They will learn to use stop-motion technique in a 2 hours course at ETSAB in January.
