Topic

Dirty Ecologies - Designing anthropocenic humus for the Earthbounds

Dear EMiLA partners and friends,

We are happy to announce that the next EMiLA Summer School will take place in Hannover, Germany from August 23rd to August 30th 2019. We will work on an exciting project area in Hannover-Misburg in an environment of underestimated potential. Even the local inhabitants are unaware of the manifold beauty and productivity of these landscapes at the very eastern edge of Hannover.

Misburg has a very eventful history on account of its geological and historical condition. As a man-made-land, it is characterized by a criss-crossing of canals, motorways, high-speed railway lines, quarries and (post-)industrial zones, creating sublime landscapes, a source of abundant biodiversity and recreation for all ,Earthbounds' (cf. Bruno Latour "Down to Earth. Politics in the New Climatic Regime", Cambridge 2018).

The 8 x 4 km perimeter of Misburg will serve as a laboratory for new kinds of terrestrial design strategies in our EMiLA Summer School. We are going to explore the urban jungle, industrial estates, agricultural land and nature conservation areas up and down the pit slopes and in the water. By viewing the limestone pits, oil refinery and landfill as an, anthropocenic humus', we ask ourselves: How can we design an integrated and aesthetic meshwork to reclaim the site for all .Earthbounds'?

Activities

At the very beginning of the Summerschool we are starting to get to know our project site by moving through the urban landscape by bike and by feet during the weekend. Different (guided) tours like walking on the landfill or exploring nature conversation areas giving us an insight in the complexity of our design area. In addition we have invited some external experts from research, administration and society to give us some inputs about the "wild east of Hannover".

From Monday to Friday our work and design centre is located in the Faculty of Architecture and Landscape, Institute for Open Space Planning and Design. We have an entire pavilion with an adjacent sculpture garden at our disposal to work and promote our collective creativity. Therefore, a mixture of different analysis and design techniques and presentation methods will diversify and accelerate our co-working.
